iiSmarTork Demo Web App	ST_WA_D	Free to access				

The iiSmarTorkDemo is a non-intrusive actuator add-on sales concept tool. Its aim is to help develop the idea of internet enabled actuation and explore applicable applications by using Wi-Fi connectivity technologies.

It demonstrates how an actuator can be monitored from any smart device, be it a mobile phone, tablet or desktop.

When used on an appropriate application you can also allow actuator control via the smart device.

The iiSmarTork product range will be developed to provide communication via Bluetooth, Wi-Fi, 2G/3G, and allow monitoring, control and actuator configuration where appropriate across a range of actuators.

Integration with BigData sources for ESD and intelligent control will also be covered.
